Detailed Action

1.) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2.) Claims 57, 60, 61, and 64 are rejected under 35 U.S.C. 102(b) as being anticipated by either one of Essers et al. (4,174,477) or Willems (4,234,779). The patents to either one of Essers et al. (4,174,477) or Willems (4,234,779) each disclose a method of electric arc welding with the steps claimed. In regard to Essers et al. (4,174,477), see figure 1 and the discussion thereof and note: welding electrode “B”; arc “C”; a surrounding plasma at “D”. In regard to Willems (4,234,779), see figure 1 and the discussion thereof and note: electrode 11; arc “M”; surrounding plasma “P”.

3.) Claims 58, 59, 62, and 63 are objected to for depending from rejected claims, but would be given favorable consideration if recast in independent form to include all of the limitations of the parent claims. None of the prior art of record teaches or suggests the step of creating a plasma by a dielectric barrier discharge in a method of arc welding as set forth in claim 58. The other claims would be given favorable consideration at least because they depend from claim 58.

Art Unit: 1725

4.) Claims 1-56 are allowable over the prior art of record. None of the prior art of record teaches or suggests an electric arc welding torch with the features set forth in independent claim 1, especially the limitations associated with the first and second dielectric sleeves and the terminals to connect a high frequency power source in the manner claimed to create a dielectric barrier discharge plasma. None of the prior art of record teaches or suggests the electric arc welding torch with the features set forth in independent claim 24, especially the limitations directed to the dielectric sleeve that creates a dielectric barrier discharge. The dependent claims are allowable at least because they depend from allowable claims 1 and 24.

5.) The patents to Poulsen (3,309,564), Liefkens et al. (3,612,807), Otani et al. (4,767,907), Matus et al. (6,753,497) are cited to show prior art arc welding torches that have a plasma source incorporated therein.
